

alarms

Military specification internal power

With its own unique 'Ultra' GPRS/GSM signalling, our temporary intruder alarm system meets BSEN 50131 for Intruder Alarm Systems Grade 2 /Class 2.

The system complies with 'enhanced' level of the Security Systems and Alarm Inspection Board (SSAIB) Code of Practice for Temporary Alarms. Monitored 24/7 with recorded capture of individual's entry and exit times.

The system is totally independent from the property's mains power or phone line status and proven in thousands of operational hours use. The technology within the alarm is used by a number of Police forces under their witness protection schemes.

Multiple detectors can be wirelessly connected to each alarm system including :-

Smoke detections (permanently live protecting against 'hot-works' in the property)

Heat detection where boiler or server rooms are live

Flood detection

Personal attack

Freeze / cold temperature detection

Gas detection

Door movement sensor

Vibration sensor (for high value items)

External, long-range PIR for building sites

Optical smoke detector for large spaces

100%
Reliable

alarms

Military specification internal power

100 % peace of mind

Manned response to activations with detailed inspection report

Remote arming and dis-arming at any time for scheduled visits or contractors failure to re-arm the unit

Military specification internal power giving over three years battery life

Multiple long range wireless detector zone capability for all sizes of property. Remote detectors include internal and external PIR's, Smoke, and Vibration

Smoke detection is live even with the unit 'dis-armed'. This protects the property when contractors are conducting 'hot-works' and affords additional H&S protection for live-in Guardians.

Internal or external sirens dependent on the security requirement with mute facility to minimise disruption to adjacent tenants
